- The Faculty reserves the possibility to make changes in the study program and update accordingly.
- The student has to specialize in two of the five tracks (communications, signal processing, nano-electronics, electro-optics and bio-engineering).
- Each student must learn **Total 5 Electives** - two electives each of the two tracks he chose to specialize in them. That is, 4 electives courses that choose to specialize. Course 5 choose from courses of all the tracks in electrical engineering, provided the student meets the pre.
- A student who studied **communication+signal processing** needs additional elective course in one of the tracks to complete 6 courses in (since "Digital Signal Processing 1" (83-320) is a required course overlaps two tracks).
